Patent No. 6262025
GENERAL INFORMATION:
APPLICANT: ISA-HOTOWICz, David
APPLICANT: Lewis, Julian Hart
APPLICANT: Lewis, Julian Hart
APPLICANT: Artavanis-Taskonas, Spyridon
APPLICANT: Gray, Grace
TITLE OF INVENTION: NUCLEOTIDE AND PROTEIN SEQUENCES
TITLE OF INVENTION: OF VERTEBRATE DELTA GENES AND METHODS BASED THEREON
NUMBER OF SEQUENCES: 94

                                                                                                                                           셤
                                                                                                                                                                                                                               C-delta-1 polypeptide (AAW00876) is the chick homologue of Drosophila Delta, a protein that binds to Notch protein. Expression of C-Delta-1 correlates with onset of neurogenesis. The C-delta-1 amino acid sequence was deduced from a cDNA clone (AATS8888) obtd. from chick stage 4-6 terminal amino acids of the longer version, was also isolated, and mouse (AAW11720) and human (AAW11721-38) Delta-1 polypeptides have been identified. Delta-1 proteins can be used to treat or prevent disorders or colon cancer, melanoma or seminoma, and nervous system disorders promote tissue regeneration and repair
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  KEEHGKCEAKCETYDSEAEEKSAVQLKSSDTSERKRPDSVYSTSKDTKYQSVYVISEEKD 719
                                              C-delta-1 polypeptide (AAW11719) is the chick homologue of Drosophila Delta, a protein that binds to Notch protein. Expression of C-Delta-1 correlates with onset of neurogenesis. The C-delta-1 amino acid sequence was deduced from a cDNA clone (AAT58897) obtd. from chick stage 4-6 embryos. An alternatively spliced variant (AAW00876) was also isolated, and mouse (AAW1720) and human (AAW1721-38) Delta-1 polypeptides have been identified. Delta-1 proteins can be used to treat or prevent disorders characterised by increased Notch activity, such as cervical, breast, lung or colon cancer, melanoma or seminoma, and nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   301 HHKPCKNGATCTNTGQGSYTCSCRPGYTGSSCEIEINECDANPCKNGGSCTDLENSYSCT 360

This sequence represents the chick delta protein amino acid sequence.

Delta is a toporythmic protein that contains a sequence which is cleaved

CC by the metalloprotease-disining kuzbanian (Kuz). Cleavage by Kuz

results in two fragments, a soluble amino terminal fragment consisting

cessentially of the extracellular domain, and a membrane bound fragment

CC consisting of the transmembrane domain and the intracellular domain. The

soluble fragment is able to bind to Notch. Delta plays a key role in

differentiation, and therefore detection and measurement of delta

activation is important in the study of differentiation. The invention

cativation is important in the study of differentiation. The invention

contained for detecting and measuring delta activation. Delta cleavage

competides, and chimeric proteins are useful for modulating the activity of

Notch, delta or kuz or at least one of the signalling pathways in a cell

con organism, expressing Notch. By contacting a cell with kuz protein is

modulated and vice versa. A delta cleavage peptide or its derivative

conclusion such as cervical, breast, colon or lung cancer, melanoma or

capable of binding kuz protein is useful for treating or preventing a

clisease or disorder associated with increased delta activity or

capable of summans. A recombinant cell comprising a delta peptide is

capable of disorder associated with increased delta activity or

capable of summans. A recombinant cell comprising a delta peptide is

capable of disorder associated with increased delta activity or

capable of disorder associated with increased delta activity or

capable of disorder associated with increased delta activity or

capable of disorder associated with increased delta activity or

capable of delta cleavage peptide is useful for the disgnosis of diseases or

capable or disorder associated with increased delta activity or

capable or disorder associated with increased delta activity or

capable or disorder associated with increased delta activity or

capable or diso
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            activity comprising measuring the ability of delta cleavage peptides in a sample to bind kuz protein. A complex of delta protein and kuz is useful for diagnosing or screening for the presence of, or predisposition to developing a disease or disorder associated with aberrant levels of the complex, comprising measuring the level or functional activity of the complex or RNA encoding delta or kuz in a sample. The delta cleavage peptide is also useful for promoting tissue regeneration and repair, for treating liver cirrhosis, keloid formation, psortasis, baldness and degenerative or traumatic disorders of the sensory epithelium of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New cleavage peptide, nucleic acids and antibodies useful for diagnosis, prevention and treatment of cancer, disorders of central nervous system,

The protein or fragments, especially AAW75493-W75495, can be used as a drug to control vascular cells. The sequences were isolated and the truncated fragments were generated using the primers AAX16818-X16831

                                                                                                                                                                     8 6
                                                                                                                                                                                                                                                                             The present invention describes full length and shortened human delta-2 proteins. Human delta-2 is a differentiation inhibitor which inhibits the differentiation of undifferentiated cells (other than brain or muscle cells), such as blood cells, and enhances the proliferation of undifferentiated blood cells. Products of human delta-2 may be used for the treatment of diseases such as leukaemia and malignant tumours. They may also be used in the culture of human cells in vitro, e.g. for production of supplies of undifferentiated blood cells. The present electron example of the present

The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO antibodies, agonists and anagonists are useful for treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erythematosus, rheumatoid arthritis, osteoarthitis, juvenile chronic arthritis, spondyloarthropathies, systemic sclerosis, idiopathic inflammatory myopathies, sjogran's syndrome, systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central and peripheral nervous systems, hepatobiliary diseases, inflammatory bowel disease, gluten-sensitive enteropathy and Whipple's disease, autoimmune chromatory and transplantation associated diseases, including graft rejection and graft-versus-host-disease. AAC58397 to AAC58578 represent PCR primers and hybridisation probes used in the isolation of ruman PRO sequences. AAC58579 to AAC58642 and AAB33414 to AAB33477 represent human PRO polymucleotide and protein sequences given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                             Sixty four PRO polypeptides, useful in the diagnosis and treatment of immune related disorders, e.g. systemic lupus erythematosis, rheumatoid arthritis, osteoarthritis, thyroiditis and diabetes mellitus.

```
The present invention describes nucleic acids encoding PRO polypeptides useful for preventing, diagnosing and treating diagnosing a cardiovacular, endothelial or angiogenic disorder in mammals by modulating cell proliferation, and conflowacularisation, and for identifying agonists and antagonists of these processes. The nucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PRO expression such as cardiovascular, endothelial or angiogenic disorders in mammals (e.g. atherosclerosis, cancers and cardiac hypertrophy). For example, the nucleic acids (NGs) and vectors containing them and the PRO polypeptide may be used to treat disorders associated with decreased PRO expression. AAA77510 to AAA77721 and AAB24388 to AAB24435 represent
Nucleic acids encoding PRO polypeptides useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or angiogenic disorders in mammals.

                                                                                                                                                                                                                                             gonists (preferably anti-PRO agonist antibody or a small molecule mimicking the biological activity of PRO polypeptide) are useful in vitro or in vivo for inhibiting the growth of a tumour cell. Compositions comprising the PRO polypeptide) are useful in vitro or in vivo for inhibiting the growth of a tumour cell. Compositions comprising the PRO polypeptides are useful for inhibiting neoplastic cell growth and for treating cancer including breast, ovarian, renal, colorectal, uterine, prostate, lung, bladder, central nervous system concer melanoma and leukaemia in a mammal. The PRO polypeptides are also useful for treating other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal, chaptaces and inflammatory, angiogenic and immunologic disorders as well as being useful for identifying agonists to PRO polypeptides by contacting the polypeptide with a candidate molecule and monitoring biological activity mediated by the polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             7;

                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                                                                                                                                              ANU12172-AAU12446 represent novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bioactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing PRO polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tumours by comparing PRO polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor alpha (TNF-alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation or gene expression in pericyte cells, the release of proteoglycans from cartilage, the proliferation of actorogram from peripheral blood monocytes (PBMCS), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor VIIA. The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polymucleotides encoding PRO polypeptides can be used to generate probes, antisense RNA/DRA, the release of properties probes, antisense RNA/DRA, the release of properties or the probes, antisense RNA/DRA, the release of the polymucleotides encoding probes.

```
The invention relates to novel human angiogenesis-associated proteins designated PRO proteins (AABS3064-BS3097), and to nucleic acids encoding PRO proteins. The invention also relates to vectors and host cells comprising a PRO nucleic acid, the recombinant production of a PRO protein, agonists of a RRO protein, fusion proteins comprising a PRO nucleic acid, the expression of a PRO protein, and compounds which inhibit the expression of a PRO gene. The invention additionally encompasses methods of identifying modulators of PRO expression or activity, diagnoshing a cardiovascular, endothelial or angiogenic disorder, or a susceptibility to such a disorder by detecting mutations in a PRO gene, or the expression level of a PRO gene within a particular tissue, treating a cardiovascular, endothelial or angiogenic disorder via the administration of a PRO protein, PRO nucleic acid, or PRO indiced angiogenic disorder by detecting or stimulating endothelial cand methods of inhibiting or stimulating endothelial call growth, cardiac hypertrophy or PRO-induced angiogenist thereof administration of a PRO protein, or an agonist or antagonist thereof administration of a PRO protein, or an agonist or antagonist thereof cardiovascular, endothelial or angiogenic disorder, such as therefore and proteins, antibodies against pRO proteins, proteins, and proteins and the actoric and angential infarction, hypertension, diabetic retinopathy, rheumatoid arthritis, Crohn's disease, Huntington's disease, or stroke. PRO proteins, a disease, or stroke. PRO proteins, and proteins, and in gene tecombinant production of PRO proteins, as hybridisation probes to make therapeutic agents. The present sequence represents a protein of the invention make therapeutic agents.

The present sequence represents a PRO protein of the invention
                                                                                                                                                                                                                 New isolated nucleic acid for producing a PRO polypeptide, analyzing genetic disorders and treating cardiovascular, endothelial or angiogenic disorders, such as atherosclerosis, wounds or cancer.

The invention describes an isolated nucleic acid (I) comprising, or which has 80 % sequence identity to, or the full-length coding sequence of, one of 275 nucleotide sequences, and which encodes a corresponding col 275 nucleotide sequences, and which encodes a corresponding col 275 nucleotide sequences, where all sequences are given in the specification. The polypeptide encoded by (I) is used to detect PRO polypeptides, link a bioactive molecule to a call expressing a PRO polypeptide, modulate a biological activity of a call, stimulate the release of tumour necrosis factor (TNF)-alpha from human blood, modulate the proliferation or differentiation of cells or gene expression, stimulate the release of proteoglycans, stimulate the release of cytokine stimulate the release of proteoglycans, stimulate the binding of A-peptide conference of tumour in a mammal. The nucleic col factor VIIA, or detect the presence of tumour in a mammal. The nucleic colienses, premature aging, acquired immunodeficiency syndrome colinth defects, premature aging, acquired immunodeficiency syndrome collistications. The nucleic acid is useful as hybridisation probes, in chromosome and gene mapping, and in generating confidence of antisense RNA or DNA. The polypeptides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. Both are useful in tissue typing. This is the amino acid sequence of a novel human secreted and collapsed to a collapsed to a collapsed to a novel human secreted and collapsed to a collapsed to a collapsed to a novel human secreted and collapsed to a collapsed 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New secreted and transmembrane PRO nucleic acids, for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, axquired immunodeficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                        Gao W;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides and polynucleotides are useful for preparing a medicament useful in the treatment of diabetes, bone and/or cartilage disorders (e.g. rheumatoid arthritis, sports injuries, osteoarthritis), obesity, hyper- or hypo-insulinaemia, hearing loss, and coagulation disorders (e.g. stroke, heart attack). Anti-PRO antibodies are useful in diagnostic assays for PRO, by detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. ABUSBOR70-ABUSBIL44 represent the human PRO polypeptides of the invention. Note: The sequence data for this patent was obtained in electronic format directly from the USPTO web site at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DCKTFFRVCLKHYQASVSPEPPCTYGSAITPVLGANSFSVPDGAGGADPAFSNPIRFPFG 120

The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for linking bioactive molecules to cells expressing PRO polypeptides, for linking collocation of cells expressing PRO polypeptides, and for for identifying agonists or antagonists. The PRO polypeptides are useful for dentifying agonists or antagonists. The PRO polypeptides are useful for contained the release of tumour necrosis factor (TNF)-alpha from human blood, for stimulating the proliferation or differentiation of chondrocytes, and detecting the proliferation or differentiation of sequences encoding PRO polypeptides are useful as hybridisation of chondrocytes, and detecting the presence of tumours. The polynucleotide sequences encoding PRO polypeptides, for generating transgenic animals or knockout animals, for the generation of antisenses RNA and DNA, in the preparation of PRO polypeptides, for generating transgenic animals or knockout animals, for the generation allysis of individuals with containing the properiors, for the generating transgenic canimals or knockout animals, for the generation canimals or knockout animals, for the generation canimals or knockout animals and the generation of animals animals and the sequence data for this patent was obtained in electronic format directly from the USPTO web site at sequence and sequence format directly from the uspto gov/psipadibles.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New secreted and transmembrane PRO nucleic acids, useful for gene therapy, in chromosome and gene mapping, as chromosome markers, in tissue typing, and in chromosome identification.
                                                                                                                                                                                                                                                                                                                                                                                        Gao
